## EDUCATION

**University of Texas at Dallas, Naveen Jindal School of Management** December 2026

*B.S. in Finance – FinTech Concentration | Coursework: Financial Modeling, Corporate Finance, Financial Information & Analysis, Applied Machine Learning in Finance, Investments, Derivatives, Database Management*

## PROFESSIONAL SUMMARY

I'm a Finance senior graduating December 2026 who builds the models FP&A teams run on: three-statement models, driver-based forecasts, budget-vs-actual variance analysis, and DCF valuations. I've done this work in a corporate FP&A and valuation externship and a finance operations internship, and I automate recurring reporting in Python, SQL, and Excel. Available January 2027.

## WORK EXPERIENCE

**TradeIT Solutions | Dallas, TX** Oct 2026 – Present

*Sales & Financial Operations Intern*

- I reconcile weekly sales and revenue data to source records, flagging and explaining variances before reporting.
- I build and maintain a sales analytics dashboard tracking revenue, pipeline funnel, and lead-source KPIs for leadership.
- I prepare weekly management summaries on revenue trends and own the final reporting package for leadership.
- I wrote the data dictionary and QC checklist that standardize metric definitions and catch errors before every update.

**Attronica | Remote** Sep 2026 – Nov 2026

*Financial Planning & Analysis and Private Company Valuation Extern*

- I built a three-statement model from 4 years of audited financials, tying out the balance sheet, cash, and equity.
- I analyzed 12 monthly P&Ls and top-customer data to find cost drivers, customer concentration, and retention risk.
- I built base, bull, and bear driver-based forecasts for a business division, with breakeven analysis, and defended the assumptions in an executive stress-test review.
- I ran ratio and working capital analysis (EBITDA margin, DSO, DIO, current ratio) and wrote memos for leaders.
- I valued the company with DCF and comps and delivered a strategic recommendation and one-pager to leadership.

**Homes & Homes | Lagos, Nigeria** Jun 2020 – Aug 2020

*Real Estate / Accounting Intern*

- I supported the quarter-end close, reconciling accounts and preparing monthly financial reports for senior staff.
- I performed account reconciliations in Excel across 25+ property listings, keeping 100% documentation accuracy.
- I maintained transaction records and weekly financial reports across 3 concurrent real estate deals.

## PROJECTS

**FinHack 2026 – ML Earnings Sentiment Prediction Model (Team Competition)** | Python | scikit-learn

- I built a Random Forest model predicting 5-day post-earnings stock direction for NVDA, AMD, MSFT, GOOGL, and META, comparing price-only features against news sentiment and cross-company AI sector spillover effects on returns.
- I engineered momentum, volatility, and VADER headline sentiment features with a time-based train/test split to prevent look-ahead leakage, then shipped a 5-tab Streamlit dashboard with live what-if predictions for competition judges.

**Atlas – AI Executive Assistant & Agent Automation** | Claude Code | Claude API | MCP | Python

- I built an AI assistant with 9 custom agents and MCP integrations to Gmail and Google Calendar using the Claude API.
- I automated a daily morning routine that triages my email, pulls my calendar, and builds a time-blocked daily plan.
- I built a research agent that runs deep web research and returns structured summaries to support my decisions.

**Quant Strategy Pipeline** | Python | SQLite | Pandas | Streamlit

- I backtested an EMA crossover strategy with ATR position sizing and VIX regime filters on SPY price data since 2015.
- I stored every run in SQLite with a dashboard of equity curves and drawdowns; first run: 9.02% CAGR, 1.36 Sharpe.

## VOLUNTEER EXPERIENCE

**Garland Animal Shelter** 2025 – Present

*Volunteer | 100+ Hours*

- I completed 100+ hours of animal care, coordinating weekly with shelter staff to prioritize the highest-need animals.

## TECHNICAL SKILLS

**FP&A & Finance:** Budgeting & Forecasting, Budget vs. Actual Variance Analysis, Three-Statement Modeling, Scenario & Sensitivity Analysis, DCF, Comparable Company Analysis, Ratio & Working Capital Analysis, Month-End Close Support, Account Reconciliation, Management Reporting

**Excel & BI:** Advanced Excel (INDEX/MATCH, XLOOKUP, SUMIFS, PivotTables, Power Query, NPV/IRR), PowerPoint, Tableau, Power BI

**Programming & Data:** Python (Pandas, NumPy, Streamlit), SQL (Oracle, SQLite), R, VBA, Git

**AI Engineering:** Claude Code, Claude API, ChatGPT, AI Agents, MCP, Prompt Engineering, Automation

**Certifications:** Citi Markets Quantitative Analysis (Forage); DataCamp ML Certification (in progress)
